

Save time and money with new DTM technology

PRODUCT UPDATE FROM THE GLOBAL PAINT COMPANY

Say goodbye to etch and wash primers - say hello to Metalux 2 DTM

Bring speed back into your workshop with ChemSpec's latest breakthrough direct to metal primer (DTM). DTM is an epoxy-modified primer system and is isocyanate free. With its excellent anti-corrosion properties it sticks beautifully to aluminium and steel.

The development of Metalux 2 DTM is yet another reason why we're getting people to convert from over-priced refinish systems to Metalux 2.

DTM is the magic tool when your bodyshop is feeling the pressure of too many jobs and too little time. By using DTM, you're completely cutting out the intermediary stage of etch or wash priming which inevitably accelerates turn-around time of repair jobs. In fact, you can save up to 1 hour per job with DTM.

You can now prime bare metal surfaces without any pre-treatment. DTM is better than traditional epoxy primers due to its fast sanding properties. It is fully compliant with

USA VOC legislation and can be applied to steel, aluminium and galvanised steel. DTM gives a high film build and provides optimum adhesion and excellent corrosion protection on bare metal and OEM surfaces.

The development of Metalux 2 DTM is yet another reason why we're getting people to convert from over-priced refinish systems to Metalux 2.

Competing in the same league as other top brands, this premium refinish system offers you a whole range from primers, basecoats, clearcoats, hardeners and accessories that deliver superior performance in any climate.

Metalux 2 is backed by the 4LIFE lifetime warranty giving you ultimate peace of mind. So, if productivity, profitability and value for money are what you're looking for, isn't it time to switch to Metalux 2?
